QUOTATION NO: 8/2/89

## PROJECT DESCRIPTION: SUPPLY OF ELECTRICAL NETWORK DESIGN SOFTWARE (RE-ADVERT)

Ephraim Mogale Local Municipality hereby invites quotations from suitably qualified and interested service providers who meet the required minimum specifications for the **Supply of an electrical network design software**.

### TERMS OF REFERENCE / SCOPE OF WORKS

#### **General Description**

The Municipality requires an easy to use software package that can be used to design low and medium voltage (400/11000volt) municipal distribution networks and to evaluate these networks for voltage drop and loads on cables and transformers across residential, business and industrial customers. The networks will be a mixture of underground and overhead networks. This should include protection devices, fault levels, voltage drop and cable optimization. The data/networks/results must be graphically displayed with ease of use and/or editing/adjustment. The parameters must be user-defined for pre-set preferences or existing equipment. The status of components must be colour coded for easy identification of problem or risk areas or components. Although it must mostly be for radial networks limited loop modelling should be possible. It should be possible to select only certain sections for study. It should be possible to place the network layout on the background of a graphic image like a map or aerial photo. It should be possible to operate on the existing systems of the Municipality like Microsoft (MS) Windows platforms; Windows 7, Windows 8.1, and Windows 10. It should be compatible with the current software systems in use by the Municipality like MS Office and Excel. Currently this will be for a single user and there should be an option to expand it to more users later. There should be capacity to include at least 500 components (transformers, cables, kiosks) in one design. The quotation must include all items required to make the system operational. The designs should be graphically displayed with printer and plotter options as well as spreadsheets with data. The annual license fees or upgrade fees must be clearly stated and annual increases may not exceed the CPMD. Online training and support must be available. Future expansion should allow more users and compatibility with Bentley Power Draft V8 and the ability to overlay the designs on map images. It should be possible to set graphical images as the backdrop

#### **GENERAL FUNCTIONS**

- Studies or simulations must be possible for 3 or 4 wire balanced and unbalanced load with Delta or Star connection.
- Studies for Medium Volt 3 wire, 3 phase unbalanced Delta connected systems must also be possible.
- Volt Drop Analysis
- Fault currents (phase to ground, phase to phase, phase to neutral etc)
- Thermal overloading of cables, transformers
- Load losses
- No-load losses
- Protection co-ordination and proper discrimination
- Energy (Bulk, domestic)

Quote: 8/2/89 (Re-advert)

- Under and Over voltage flags
- Island and Open nodes
- Branch and Total impedances,  $Z+$ ,  $Z-$  and  $Z_0$
- Phase voltages
- Network Currents
- Branch and Total cable lengths
- Algorithm for residential connections in South African conditions and their quantities
- Load activity for specific time periods
- Load profiles
- Calculation using Empirical or Statistical Herman-Beta

## **DATABASE**

Comprehensive element database, which is easily modified to include customer specific elements such as transformers, cables and protection devices.

It should be possible to create a user specific database from the master that includes specific materials for designs that require only specific materials and elements. For example, if you wish designs to use only 35mm, 70mm and 95mm, PVC, Copper, SWA cable, the customized database need only have these cables.

## **REPORTING**

- Simple user configurable reports and template creation.
- Voltage drop and fault current simulation data must be presented in graphic and text formats.
- Graphic display of the network must indicate overloading of transformers and cables in colour for easy identification.

## **NETWORK ELEMENTS**

- Source
  - User definable information includes, Base voltage, input voltage (per unit), fault levels (including angles) for three and single phases.
- Co-generation
  - Fully definable co-generation including sequence impedances. Renewable network modelling must be possible.
- General Motor
  - Where a simple motor is required, these fully customizable devices can be created in the database and used to determine motor starting transients that may cause voltage brown-out conditions.
- Induction Motor
  - Induction motors have more complex starting curves and can be fully modelled, thereby obtaining accurate analysis of their effect on the network being modelled.
- Transformers
  - While the library contains many transformers it is simple to add specific types that you may have in your network. There are many parameters included in the transformer including number of taps, vector grouping, primary and secondary impedances, grounding and core losses to name but a few.
- Regulators
  - Voltage regulators can be modelled with their associated parameters.
- Cables / conductors
  - While the database contains a host of cables adding additional cables is a simple procedure. Entering all the relevant information means the network accurately models the real world. Included in the definitions are the maximum operating current (at the specified temperature) and the overload currents.
- Protection Devices
  - Model various protection devices emulating various trip curve types.
- Conductor Groups

- When defining conductors you can associated them with a specific group such as underground, overhead, MV, LV etc. This aids in network modelling and analysis.
- **Series Capacitors**  
Where you are required to insert series capacitors you can do so.
  - **Shunt Capacitors**  
You can include shunt capacitors in your networks for power factor correction purposes.
  - **Reactors**  
Where necessary there are generic inductors that you can insert in-line.
  - **Power factor correction**  
The design of power factor correction must be possible.
  - **Network maintenance modelling**  
It should be possible to do a simulation of the load if switch for maintenance is necessary.
  - **Maximum Demand and load management**  
The design of power factor correction must be possible.
  - **Load profiles**  
It should be possible to load actual load profile data for evaluation.
  - **Network balancing**  
The software must also do an automatic balancing calculation and graph

## NETWORK OPTIMISING AND ANALYSIS FUNCTIONS

- **Bulk change tool**  
This tool helps update the chosen parameters from a point in the network up towards the transformers or from a specific point downwards. For example, should you wish to change all the 25mm ABC conductor from a particular point up to the transformer to 35mm ABC or you wish to balance the network from a specific tap point down to the domestic loads.
- **Load scaling**  
This function is for master planning to enable you to determine the network integrity when integrating expected network growth and in-fill.
- **Optimise conductors / Optimising using Conductor Groups**  
This function should optimise a network for the selected group of conductors. For example, should you select only 10mm, 16mm and 25mm underground PVC cable in a particular area, the program should automatically go through all the permutations using these cables to best optimise the design using only these three cable types – taking into consideration the desired voltage drop settings for the given ADMD and load parameters.
- **Automatically determine the network load saturation point.**  
This feature should assist the user in determining the optimal position of the network link points.
- **Load Profiling.**  
The load profiles should enables the user to determine the maximum demand - associating a particular profile with a specific load. For example, it should be possible to create load profiles for domestic, street lighting, commercial and industrial load types. In the network these profiles are then combined to give an overall profile in both numeric

and graphical formats. Must be able to do designs with unbalanced residential loads including customer connection cables. Modelling must include limited loop networks

- **OLE Linking and embedding.**

Importing and exporting information can be accomplished using a variety of formats, from EXCEL to CSV. This enables the program to interface with other applications where required.

- **Network analysis must be possible for:**

- Additions to existing networks
- Problem areas in pre-existing networks
- Optimization of networks
- Design of new networks
- Calculation of voltage drop in networks
- Calculation of fault currents
  - 3 Phase
  - 2 Phase
  - Phase to Ground
  - Phase to neutral
- Thermal overloading of cables
- Protection co-ordination and discrimination
- Domestic algorithm calculations
- The software should be able to include different configurations and configuration combinations like:
  - 3 phase balanced Delta and/or Star
  - 3 phase, 4 wire unbalanced with multiple grounded neutral
  - 3 phase, 4 wire unbalanced with single grounded neutral
  - 1 phase, with multiple grounded neutral
  - 1 phase, with single grounded neutral
- The software must be suitable for:
  - 230V/400V/11000V networks
  - Satellite substations
  - Planning studies to determine voltage levels and optimized conductor size after load changes

## **TRAINING AND SUPPORT**

- Training on the application should be available on line.
- Training should be performed by personnel involved in the development and implementation of the application so that they have first-hand knowledge of the application. Training should not be undertaken by third parties.
- Support should be available online within South Africa and should be via telephone, email, physical presence or via Team Viewer.

**CERTIFICATE OF INDEPENDENT BID DETERMINATION**

- 1 This Municipal Bidding Document (MBD) must form part of all bids<sup>1</sup> invited.
  
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
  
- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
  - a. take all reasonable steps to prevent such abuse;
  - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
  - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
  
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
  
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
